

Measuring for your new blinds is easier than you might think! All you have to do is follow our simple tips, double-check everything you do, and set aside some time to do it. Below is a handy guide for measuring for **Click2Go Shutters**.

Before You Start, Check for Squareness

First of all, you need to check that your recess is pretty much square, making it suitable for our shutters. All you need to do is **measure the recess diagonally from corner to corner on both sides**. Then, compare the two measurements.

If the difference is 12mm or less, you're good to go. If they vary by any more than that, then unfortunately you won't be able to fit shutters in your recess. If this happens, don't worry, there are plenty more fish in the sea, or, in this case plenty more blinds and curtains to choose from across our sites.

Measuring

Simply measure the full width of the recess, at the front where the Shutter will sit. **Measure the width at the top, middle and bottom.**

Next **measure the drop on the right, in the centre and on the left.**

Write down the smallest measurement, for both the width and the drop, these are the sizes you will use to place an order.

Top-Tip:

If your window has a window sill, choose 'Recess With Sill' fitting. Measuring for this is exactly the same.
